

Anaphylaxis Management Protocol

1. Determine if there is a student with a history or risk of anaphylaxis on the school campus by reviewing:
 - a. Current school year medical alert list.
 - b. Previous school year medical alert list
 - c. Previous school year IHCPs

2. Schedule a meeting with parent/guardian of the student to determine:
 - a. Previous medical history

 - b. Type and level of care that parent is seeking for their student
 - i. Epi-pen kept in health room?
 - ii. Benadryl kept in health room?
 - iii. Epi-pen carried on student?

 - c. Will Benadryl and Epi-pen need to be kept at school or on student?

3. Collaborate with student, parent/guardian and physician to:
 - a. Obtain medical orders from for:
 - i. Benadryl and Epi-pen to be administered at school as needed
 - ii. Student to carry epi-pen (Physician, parent and nurse will need to sign off that student has knowledge to carry Epi-pen on self.)
 - b. Have supplies (Epi-pen and Benadryl) at school or with student per physician orders.

4. School Nurse will:
 - a. Prepare “Individualized Health Care Plan” (IHCP).
 - b. Notify appropriate school staff with a need to know of student’s condition (Teachers, PE Teacher, Cafeteria staff, Monitors, Administrative staff)
 - c. Train designated staff on the signs, symptoms, and medical management of anaphylaxis and document such training.
 - d. Train designated staff on “Emergency Action Plan” and the use of the Epi-pen.
 - e. Educate staff that “Emergency Plan” and Epi-pen must accompany student on all field trips.
 - f. Provide retraining of staff as needed throughout the school year.
